STUDYING AT CESI

BECOME AN ENGINEER AT CESI

French applicants

- Students from CESI undergrad courses
- Students in 2nd year of a CPGE program in the STEM sciences
- Students in the final year of a scientific BUT, BTS+ATS, BSI or undergraduate degree
- Students having completed a DUT, BTS, 2-year undergraduate program in a scientific field as well as CESI supplementary coursework

International applicants

Admission into the first year of the engineering graduate program after at least 2 years of higher education in science or technology or after a 3-year bachelor's degree in science, IT, or computer engineering.

Pathway Programs

French Engineering Pathway

This one-year preparatory program focused on sharpening linguistic (French and/or English), mathematical, and scientific skills, prepares students for the three-year engineering cycle.

Pre-Master's Pathway

This one-year preparatory program, in partnership with the n+i network, is intended for international students holding a Bachelor's degree and wishing to complete the last two years of their Master's degree in an engineering school. This program offers a combination of intensive language (English or French, as required) and scientific courses.

GO FURTHER

EXECUTIVE POST-GRADUATE PROGRAMS®

Our 12-month Executive Post-Graduate Programs®, available after a Master's degree in a relevant field, are rigorous programs with one guiding principle: close ties between theory and practice. You will be able to put this hands-on knowledge to use through work placements and a professional thesis. Certified by the Conférence des grandes écoles (CGE), Executive Master's programs are divided into four major areas of expertise: IT, Industry, Construction and Management.

Become an accomplished computer science engineer at CESI

CESI'S PEDAGOGY

Develop your skills with an innovative, problem-based pedagogy! Whatever field you choose to study at CESI, you will be immersed in projects based on real company problems in order to gain hands-on learning experience. This will help you gain the soft skills and technical expertise needed in today's working world. The objective? Develop the skills companies are looking for to guarantee that you are competitive on the job market and ready to adapt to industry's fast-paced changes.

OUR INSTITUTION

CESI, a graduate school of engineering, currently has 26,000 students across its 25 campuses, a network of 8,000 businesses, 130 partner universities, and 95,000 alumni. CESI has set a standard of excellence in French higher education through the development of exceptional academic programs. We specialize in the fields of IT & Digital Technology, Industry, Construction & Public Works and Human Resources & Management, offering innovative programs that mirror the business world.

STUDENT LIFE

Social events are organized throughout the year on CESI campuses. Lead or take part in activities in one of your campus' sports, cultural, or humanitarian clubs. Events highlighting the importance of interculturality are organized by students and faculty throughout the year.

SCHOLARSHIPS

CESI scholarship of excellence rewards up to €2,000 to outstanding international candidates.

RESEARCH

Research at CESI is led by the LINEACT research and innovation, which contributes to technological progress in areas relating to industry, construction and urban life. At LINEACT, research is focused on the inter-disciplinary scientific theme "Engineering and Digital Tools" with two fields of application: Industries and Cities of the Future. Our students are in constant contact with researchers: CESI teaching faculty includes 72 researchers, conducting computer science research on topics such as modelling, design and architecture of cyber-physical production systems, artificial intelligence, digital twins, applied robotics, and advanced automation.

Join a world-class program

Choose the Master's Degree in Computer Science

To prepare our Computer science students for the challenges of a globalised world, CESI offers a program taught fully in English that is open to French and international applicants. It using the same curriculum as the Computer Science Master's program in French, all projects, conferences, and courses are taught in English.

We also give students the opportunity to learn a second language in order to further help their international career prospects. In keeping with the spirit of this international section, all the compulsory internships for the engineering program take place abroad or in an international business environment.

Lastly, our students also have the possibility to partake in academic exchanges in one of our 130 partner programs worldwide. The engineer degree, approved by the Engineering Accreditation Committee (CTI), is the international equivalent of a Master in Computer Engineering. With our Computer science course leading to an engineer degree, you can:

- Acquire the scientific and technological skills needed to work in the world of Computer Science
- Ensure a successful and long-lasting career thanks to an internationally recognised engineering degree

The Master's in Computer Science program involves 3 integrated internships. Theoretical knowledge combined with work experience allows students to develop a relevant skillset for the world of tomorrow. PBL, a teaching method based on active pedagogy, teaches adaptability and leadership, while the international experience opens up wide-ranging career prospects.

In their final year, students choose two concentrations to further improve their employability and deepen their expertise in two specific areas of the computer science field.

- Gain experience in a national and international environment
- Secure a high-paying salary with career development opportunities.

In France, engineering degrees are issued by higher education institutions following review by the Engineering Accreditation Committee (Cti) and approval from the French Ministry of Higher Education.

OF OUR GRADUATES FIND WORK WITHIN 6 MONTHS, BOTH IN FRANCE AND INTERNATIONALLY

EXCELLENCE

EXPERIENCE

DEGREE

Program

Fundamental engineering sciences and mathematics

Utilise engineering mathematics
Understand and implement advanced algorithmic concepts
Use statistics and probabilities
Use graph theory to solve problems
Utilise operations research in the context of problem optimisation
Conduct an analysis as part of a research project
Identify and analyze complex problems
Use mapping in an IT systems context

Engineering science and methodology

Use modelling methods for IT projects
Understand the concepts of big data
Work with software engineering tools
Understand how IoT works
Manage and implement IT security
Explore the principles of innovation
Understand the principles of governance
Have a Green IT mindset
Regularly conduct technology intelligence
Propose and deploy a design of experiments
Manage projects

Disciplines specific to the Computer Science field

Map and run an operating system
Explore the principles of artificial intelligence and apply them to a concrete problem
Process data in complex environments
Program an operating system (synchronisation, resource management, etc.)
Explore robotics and apply the main principles of automation
Make use of cloud computing with best practices
Software elective: specialization in front and back-end web development in a secure and complex environment
Network elective: specialization in designing network architecture and handling telecommunications technology

Human, economic, legal and social sciences

Explore team management
Use basic economic and business management principles
Be aware of international and European labor laws
Improve English language skills

Work in an intercultural environment
Study current ethics issues in the computer science field and learn how to implement corporate social responsibility
Acquire the basics of entrepreneurship
Establish and develop academic and professional goals

Career planning

Develop a career plan, identify the necessary skills for the job, and prepare for your future career as an engineer as a part of the Individualized Professional Project

For further specialisation

Choose two concentrations in your final year: Data Scientist & Big Data, 3D Augmented Reality/Virtual Reality, Cybersecurity, Robotics, Smart and Sustainable cities, Business Unit Manager, Innovation, Entrepreneurship, Prototyping, Quality-Safety-Environment & Sustainable Development. The list of concentrations available each year depends on the campus.
